Case No. C-05-01114 JW

**ROUND 2 CABLE DEFENDANTS'  
JOINDER IN MOTION FOR  
SUMMARY JUDGMENT UNDER 35  
U.S.C. § 112**

Date: TBD  
Time: TBD  
Courtroom: 8, 4th Floor  
Judge: Honorable James Ware

1  
2 The Round 2 Cable Defendants<sup>1</sup> join in the Motion for Summary Judgment Under 35  
3 U.S.C. § 112 filed by the Round 3 Defendants, and write separately to emphasize one argument  
4 raised in that motion: that all of the asserted claims that include the term “sequence of  
5 addressable data blocks” are invalid under § 112 as a matter of law.<sup>2</sup>

6 That conclusion flows directly from this Court’s claim construction and Acacia’s  
7 admissions. In its Third Claim Construction Order, the Court ruled that the term “sequence of  
8 addressable data blocks” encompasses sequencing based on time, but *also* is broad enough to  
9 encompass *other* forms of sequencing, not based on time. The Court stated that “the phrase  
10 ‘ordering into . . . a sequence of addressable data blocks’ is a very broad limitation which could  
11 include time encoding, as well as other ways of generating addressable data blocks.” (Third  
12 Claim Constr. Order [Doc. #216] at 27 (ellipses in original)).

13 Recognizing that ruling’s fatal consequences, Acacia then sought to undo it. Acacia asked  
14 the Court to reconsider its construction, and to hold instead that the claimed sequencing *must* be  
15 based on time encoding. (*See* Acacia’s Motion for Reconsideration [Doc. #237] at 13-20.) The  
16 Court, however, refused to modify its construction. (*See* Fifth Claim Constr. Order [Doc. No.  
17 259] at 14.)

18 As Acacia itself has recognized, the result is that claims that include the term “sequence of  
19 addressable data blocks” are neither described nor enabled under § 112, and are therefore invalid.  
20 Acacia has conceded numerous times that the Yurt patents fail to describe or teach *any*  
21 sequencing method other than time encoding—even though their specification makes clear that

---

22  
23 <sup>1</sup> The following defendants join in this brief: Comcast Cable Communications LLC; Insight  
24 Communications, Inc.; Coxcom, Inc.; Hospitality Network, Inc.; Cable America Corp.; Charter  
25 Communications, Inc.; Wide Open West Ohio LLC; Armstrong Group; Massilon Cable TV, Inc.;  
26 East Cleveland Cable TV and Communications LLC; Mid-Continent Media, Inc.; Cannon Valley  
Communications, Inc.; US Cable Holdings, LP; Arvig Communications Systems; Sjoberg’s  
Cablevision, Inc.; Loretel Cablevision, Inc.; NPG Cable, Inc.; Block Communications, Inc.; and  
Savage Communications, Inc.

27 <sup>2</sup> The term “sequence of addressable data blocks” appears in all of the asserted claims of the ‘992  
28 patent and the ‘863 patent.

1 time encoding is only a ‘preferred’ method of sequencing, and they describe using the patented  
2 method for subject matter unsuited for time encoding, such as ‘still pictures, . . . books, . . . [and]  
3 documents of various sorts[.]’ (‘992 patent at 6:10-15 and 7:60-63.) Acacia made this fatal  
4 concession multiple times in its motion for reconsideration, which included an entire section  
5 entitled, ‘There Are No Methods Unrelated to Time Disclosed Or Suggested In The Patent  
6 Specification For Achieving Addressability.’ (Acacia’s Motion for Reconsideration [Doc. #237]  
7 at 16.) Acacia stated:

- 8 • ‘The patent specification does not disclose any method other than time encoding . .  
9 . for achieving addressability.’ (*Id.*)
- 10 • ‘Mr. S. Merrill Weiss, Acacia’s technical expert, testified at the September 8, 2005  
11 Markman Hearing . . . that time encoding is the only scheme for addressing data  
12 blocks that is disclosed in the specification.’ (*Id.*)
- 13 • ‘Not only are no addressing schemes, other than time encoding, described in the  
14 patent, the only structure disclosed in the specification for placing the data blocks  
15 into a sequence of addressable data blocks is a time encoder . . . .’ (*Id.*)
- 16 • ‘In fact, the only addressing scheme or structure for placing data into a ‘sequence of  
17 addressable data blocks’ that is illustrated in the patent specification is ‘time  
18 encoding’ . . . .’ (*Id.*)

19 Acacia reiterated these concessions at the August 17, 2007 hearing on its motion for  
20 reconsideration. It emphasized that its own technical expert had testified that time encoding is  
21 the only addressing scheme that the specification disclosed, and that “*Indeed, this fact is not*  
22 *disputed.*” (Tr. of 8/17/07 Hrng. at 127; *see also id.* at 125 (“[T]ime encoding is the only  
23 addressing scheme for addressing data blocks in the specification,” and 165-66 (“*Nothing is*  
24 *disclosed that is not time. Only time is disclosed.*”)) The Court countered, however, that while the  
25 specification may indeed not describe any other method the patent made clear that the claims  
26 were intended to cover other methods:

27 The Court: You say that the expert here tells me that that’s the only  
28 embodiment.

1 Mr. Block: That's what he said.  
2 The Court: But that's not what the patentee said. The inventor said the  
3 *preferred* addressing scheme is time encoding, and so it  
4 seems to me that *that must mean that there are other*  
5 *schemes but that this is the preferred among them.*  
6 Mr. Block: No, that doesn't necessarily mean that. Preferred~~well~~, first  
7 of all, he doesn't give any—even though he uses the word  
8 “preferred,” *he discloses no other addressing.*  
9 The Court: I agree with that.  
10 Mr. Block: *It's not there.*

11 (*Id.* at 129-30.)

12 Acacia was candid with the Court about why it was straining for a construction that  
13 limited sequencing to time encoding—to try to preserve the patent's validity:

14 Mr. Block: And your question to me is why do we need to limit it?  
15 *And the reason is we may have validity issues.* We always  
16 have to look at a claim construction in terms of  
17 infringement but also in terms of validity . . . .

18 (*Id.* at 134.)

19 On that point, at least, Acacia was correct. The Federal Circuit has ruled time and again  
20 that patents must describe and enable the *full scope* of their claims, and that where patentees  
21 attempt to claim more than the patent specification supports, the claim is invalid. These  
22 disclosure requirements are “the quid pro quo of the patent system; the public must receive  
23 meaningful disclosure in exchange for being excluded from practicing the invention for a limited  
24 period of time.” *Enzo Biochem v. Gen-Probe*, 296 F.3d 1316, 1330 (Fed. Cir. 2002). Their  
25 purpose “is to ensure that the scope of the right to exclude . . . does not overreach the scope of the  
26 inventor's contribution to the field of art as described in the patent specification.” *Reiffin v.*  
27 *Microsoft Corp.*, 214 F.3d 1342, 1345-46 (2000). But that is exactly what the Yurt patentees  
28 attempted to do by claiming multiple methods of sequencing data, including time encoding and  
others, but disclosing only time encoding in the specification. Accordingly, the claims that do so  
are invalid. *See Sitrick v. Dreamworks, LLC*, 516 F.3d 993, 999-1000 (Fed. Cir. 2008)  
(invalidating claims that were broad enough to cover video games and movies because the

1 specification taught the method only in video games).

2 For these reasons, and the others stated in the Round 3 Defendants' Motion, Defendants  
3 are entitled to summary judgment.
